

MAIN FEATURE TAB

Comments

A centralized view of all extended-property documentation — descriptions, aliases, and attributes across tables, columns, and foreign keys — with coverage tracking.

Who

WHO IT IS FOR

Teams that want a documented database: leads onboarding new members and developers who maintain schema documentation.

What

WHAT IT DOES

Comments manages SQL Server extended-property documentation in one place — descriptions, to-dos, and aliases for tables and columns — and tracks how much of the schema is covered. Entries flow back into Searcher tooltips and generated queries.

When

WHEN TO USE IT

Use it whenever you add or update schema documentation, or to find and fill the gaps the Rating tab reports as missing.

Where

WHERE TO FIND IT

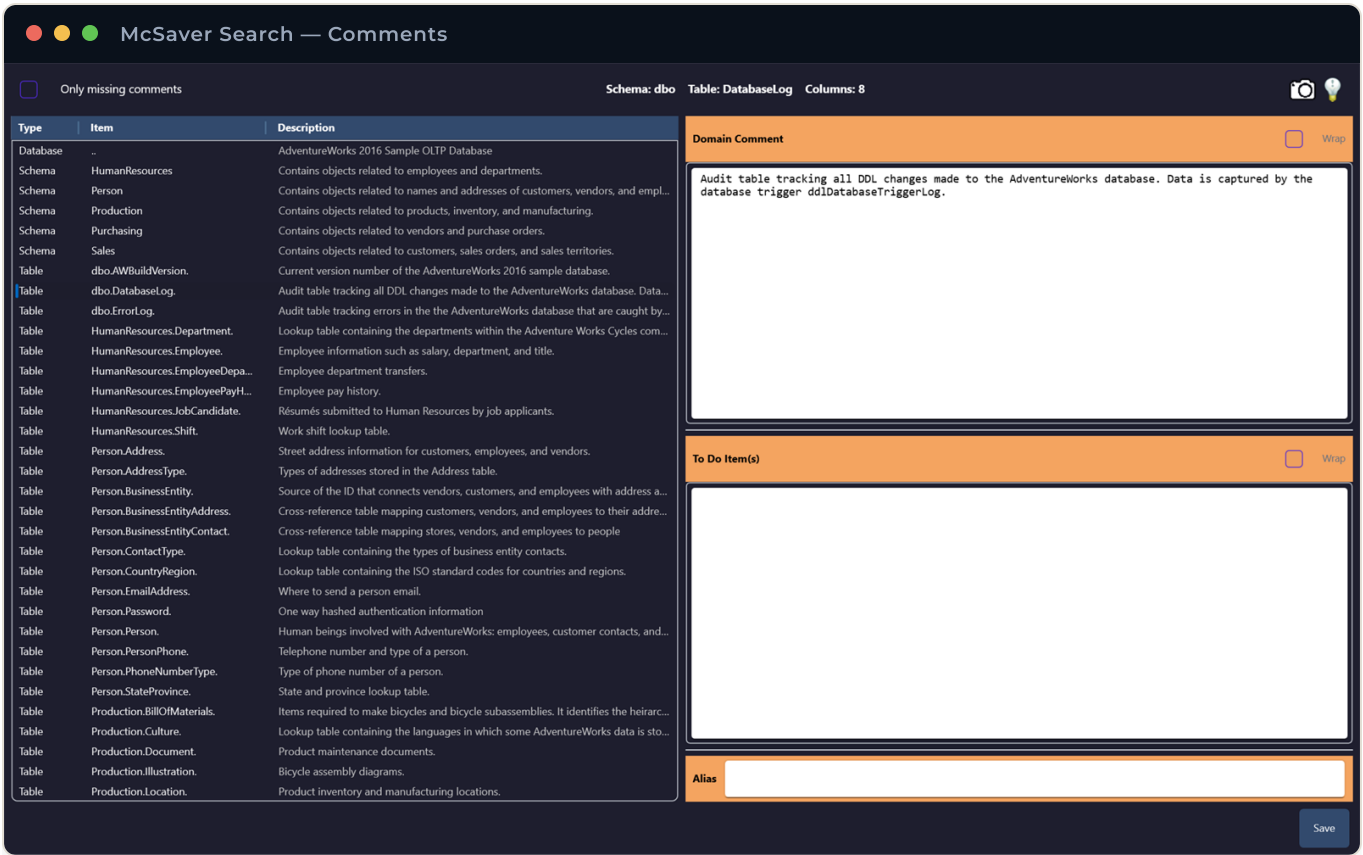

The Comments tab is on the main top tab bar (a Pro feature). Items are grouped by type with their descriptions and editable fields alongside.

Why

WHY IT MATTERS

Well-documented databases cut onboarding time dramatically — new team members read your descriptions in their tools instead of reverse-engineering table purposes.

Tip of the Day 22 tips

Every Tip of the Day for this tab — open them in the app from the lightbulb icon.

VALUE Well-documented databases dramatically reduce onboarding time for new team members — instead of reverse-engineering table purposes, they read your descriptions directly in their tools.

OVERVIEW The Comments window documents database objects, pairing a Type/Item/Description list on the left with Domain Comment, To Do, and Alias editors on the right.

FILTER Check "Only missing comments" in the toolbar to quickly find database objects that still need documentation.

VISUAL The centered label in the toolbar shows how many items are currently displayed.

ACTION Click the Type, Item, or Description column header to open a filter/sort popup for that column.

ACTION Sort a column ascending or descending directly from the filter popup — no need to close and reopen.

FILTER Use the filter popup's "Custom Filter..." option for advanced matching like Contains, Begins With, or Ends With.

FILTER Uncheck specific values in the filter popup to exclude rows with those values from the list.

SELECTION	Use Select All and Deselect All in the filter popup to quickly toggle every checkbox before fine-tuning.
VISUAL	The filter popup shows a distribution chart when values vary in frequency — it is hidden when every count is 1.
COLUMN	A ≡ marker on a header means a filter is active, while ▲ or ▼ shows the active sort direction.
FILTER	Column filters combine with the "Only missing comments" checkbox — both are applied at the same time.
FILTER	The Description column often holds long text — use the popup's Contains filter to search within descriptions.
FEATURE	Type a Domain Comment to record domain knowledge; Searcher uses it when generating tooltips or building a help file.
FEATURE	Use the To Do Item(s) editor to track work items relative to the currently selected object.
FEATURE	Set an Alias to give an element a custom name that Searcher uses when generating tooltips.
ACTION	Toggle the Wrap checkbox beside Domain Comment or To Do to turn word wrapping on or off in that editor.
ACTION	Click Save to persist your edits to the current Domain Comment, To Do, and Alias.
WORKFLOW	Selecting a different row auto-saves your pending edits first, so you can move through items without losing changes.
LAYOUT	Drag the splitter between Type and Item, or between Item and Description, to resize those columns.
EXPORT	Click the camera icon to capture a screenshot of the Comments window to your export folder.
NAVIGATION	Click the tip icon to open a random tip about using the Comments window.
